

RESTROOM CARE SUSTAINABILITY

Our sustainable solutions help you save money while saving the environment.

Sustainability

Sustainability is a mind set and an important commitment at RML. When we develop products for sale we look at them in a 360° setting - from usage, to ingredients, to packaging, to ultimate disposal.

- RML Sustainability Mind set
- Biodegradability
- Water Conservation
- Reduce Costs
- Improve Stewardship

Feminine Care Products + Sustainability

Feminine Care products present a special challenge. Feminine hygiene products are highly personal, especially tampons which, by design, are internal products. Tampons are even classified class II Medical Device by Health Canada and are highly regulated as such. All of our feminine products are made of 100% virgin material. To meet our sustainability goals we look at packaging and disposal.

HandsFree Fixtures + Sustainability

Water usage is another area where we can help with sustainability. Our RML HandsFree® restroom fixtures provide significant water conservation and cost savings.

DualFlush®

You can choose to skip every other flush with the optional urinal setting for our DualFlush unit. You implement up to 50% reduction on water use.

Automatic Faucet

The RML Automatic Faucet immediately reduces water waste by eliminating unnecessary water flow and can save up to 70% in water costs. Plus our Automatic Faucet promotes handwashing and reduces cross-contamination for a healthier environment.

Toilet Seat Covers + Sustainability

All of our toilet seat covers are biodegradable. The recycled content depends on whether they were manufactured domestically or were imported. Our domestic seat covers are Green Seal certified.

Recycled	Recycled Content %	Post Consumer Waste %	Biodegradability
Naturelle® Plus Winged Maxi	—	—	Yes
